

HOW TO DISPOSE OF YOUR BULKY WASTE?

Call the free number 800.069.960 or the landline 070/684415. Alternatively it is possible to book online: ingombranti.cosir.org. Online bookings will be validated only after the operator's call back.

Place your waste by the entrance to your home on your collection scheduled day. Make sure your waste do not cause a pavement obstruction to pedestrians and cars. It is possible to dispose a maximum of 5 items each time.

WHY WAS MY COLLECTION MISSED?

If your collection was missed this could be due to a number of reasons:

1. Inside the sack/container there is non-compliant waste;
2. Rubbish was not properly disposed and it violated the calendar and leaflets and website villasimius.cosir.org rules .
3. It was not available at the time of collection.

HOW DOES THE NEW COLLECTION SYSTEM OF BAGS AND BINS WITH MICROCHIP (OR TAG RFID RADIO FREQUENCY IDENTIFICATION) WORK.

With the acronym TAG RFID we refer to a automated identification and memorization technology for recycling collection, based on data memorization ability of special electronic labels called tags.

This innovative system, on experimentation in Villasimius, allows waste tracking from pick up to disposal.

Thanks to sacks, bins and waste cart (for business users), with RFID is possible to obtain a ideal waste management.

TAG RFID EXAMPLE

A RFID tag works by transmitting and receiving information via automated microchips placed in waste bags and containers, in order to access to a calculation system more precise and equitable (Puntual Rate) called TARI (waste tax). It is based on the real number of waste collections. In this way the user is more encouraged to accurately and precisely recycling different types of materials in order to reduce non-recyclable waste and the related taxation.

HOW TO LEAVE YOUR RUBBISH OUT?

Make sure your rubbish and recycling is available for collection by 6.00am or alternatively the night before, after 8.00pm. Organic waste, paper and glass/aluminium have to be exclusively placed inside the new containers with microchip as you can see in the pictures below.

NON-RECYCLABLE COLLECTION

Inside the provided grey recycling bags only, with TAG RFID (radio frequency identification), without bin.

PLASTIC COLLECTION

Put the plastic out in the yellow bags, without bin.

ORGANIC WASTE COLLECTION

Inside the brown bin with microchip, in the specific compostable bag.

PAPER COLLECTION

Inside the blue bin and without plastic bag If convenient place next to the bin.

GLASS AND ALUMINIUM COLLECTION

Without bags and together, inside the green waste bin with microchip.

TARI users that have not received their bins yet, have to personally go to the Ecocentro with ID or proxy for third party delivery.
