Booking collection for disadvantaged consumers (disabled, elderly); delivery to the recycling centre. Vegetable oil waste ("exhausted oil"). The used edible oil is a residue that comes from frying, cooking and preserving vegetable seed oils . Once used, it becomes a waste and it is important to recycle it. If used oil is

thrown onto the ground, down the drain or the sink it can reach aquifers and contaminate water. If, instead, it reaches the drainage system, it affects the functionality and requires an extraordinary maintenance with rising costs for the domestic user. Do not pour used oil down the sink. Recycle exhausted oil and allow its high recovery potential, from waste to resource. Re-refined oil, in fact, can be used to generate electricity and/or for machinery lubrication.
